DENTAL SERVICES AT ELITE CLINIC

PATIENT INFORMATION LEAFLET

DR. ABHISHEK BANSAL

B.D.S., M.D.S.

(PROSTHODONTIST & IMPLANTOLOGIST)

At Elite clinic we care for the general prosperity of your oral hygiene and overall dental health by giving an extensive variety of dentistry services by Dr. Abhishek Bansal. We devise a complete dental arrangement for our patients.

WHEN SHOULD ONE VISIT A DENTIST?

A dental visit should ideally begin from childhood to look for early signs of tooth decay and preventive services can be offered. A regular dental check up should be carried out every 6 months so that any dental problem can be addressed at its nascent stage.

OUR GENERAL DENTISTRY SERVICES INCLUDE TREATMENT OF:

Toothache | Tooth Decay | Dental Cavities (caries) |
Bad Breath | Tooth Erosion | Tooth Sensitivity |
Gum Problems | Oral Ulcers | Stained Teeth |
Impacted Tooth | Unattractive Smile | Chipped Teeth |
Crooked Tooth | Tooth Fractures | Diastema (Gap Between
Teeth) | Edentulous (Toothless)

DENTAL IMPLANTS

Dental Implant is a surgical treatment for adding root to the missing tooth. Dental implants have the highest success rate than any other form of treatment for surgical implants. It does not affect the adjacent tooth and maintain the stability of the bone structure and jaw line. Implants restore functionality of your jaw making it simple for you to chew and bite.

DENTAL IMPLANTS VS DENTAL BRIDGES

Dental implants are better than bridges as they don't damage the adjoining healthy teeth, more durable, Very high 10 year success rate, more natural looking and support the jaw bone.

DENTAL IMPLANTS VS DENTURES

Dental implants are better than dentures as they provide better strength and comfort needed to chew food, no cleaning hassle, durable and biocompatible. There is no movement of the prosthesis inside mouth while chewing food unlike dentures.

We have various types of implants at our clinic. Our doctor will guide you the best for the same depending on your oral condition and affordability.

CROWNS, BRIDGES AND DENTURES.

Bridges and crowns are mainly designated as fixed prosthetic devices. There are two types of Prosthetic options, i.e. Fixed & Removable. Crowns & Bridges are the fixed ones which do not need to be removed or cleaned. While the removable devices are dentures which you can take out and clean at your will.

DENTAL CROWN

Dental crowns are made to cover chipped tooth or root canal treated tooth. From Metal Free Crowns to Porcelain Fused to Metal crowns, we offer a plethora of dental crowns for your teeth.

DENTAL BRIDGE

Dental Bridge is the fixed replacement of missing teeth, which is held in the correct place by abutment teeth on either sides of gap. Even though bridges can be made from various materials, All Ceramics are the best option to go for.

DENTURES

If you are missing teeth in oral cavity, replacing those with removable dentures is a clever & cheaper option. You have to remove the dentures when not in use, especially before heading to bed.

OVER DENTURES

Over dentures are the snap-on dentures. It is designed to cover and rest on either one or more remaining natural teeth in patients having extensive bone loss. It is placed on roots of natural teeth or dental implants.

IMMEDIATE DENTURES

Immediate Dentures are complete or partial dentures, inserted within the same day, just after removing the natural teeth. The cost will vary, depending on the number of dentures.

ROOT CANAL TREATMENT

It is medically termed as Endodontic Therapy. It is treatment of infected Pulp inside your teeth. The treatment involves removing the infected pulp completely from inside of crown and roots of your teeth. It is followed by cleaning and disinfection of the canal which is then filled and sealed. The opening of tooth is then sealed to prevent further infection.

BRACES

Braces are used in most Orthodontics treatment plan either solo or in combination with the other treatment, depending on the status of the malalignment. They move and align teeth by applying pressure on the teeth.

TYPES OF BRACES

METAL BRACES

It consists of small metal brackets attached to the teeth and tied together by wire.

CERAMIC BRACES

These are made in the natural colour of a patient's teeth, making it inconspicuous and less noticeable.

INVISIBLE BRACES

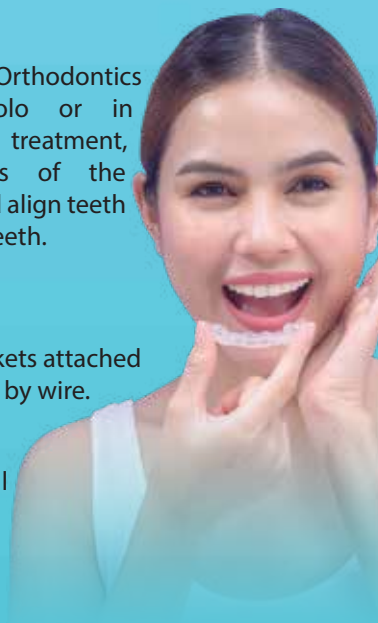

Invisible Braces or Invisalign is the latest type of braces and follows an entire different treatment approach. It does not involve brackets or wires but series of custom made invisible clear plastic aligners that are worn over the teeth.

SMILE DESIGN AND MAKEOVER:

A smile is a beautiful curve that sets everything straight. A combination of multiple procedures is needed for bringing back your precious smile. Get milky white teeth and beautiful smile through procedures like **lamine veneers, teeth bleaching and digital smile designing.**

DENTAL SCALING & POLISHING

Awful breath and bleeding gums are hallmark for gum illness. **Dental Scaling** is a procedure where our dentist cleans your teeth and gums to remove plaque buildup and stains. **Dental Polishing** is performed after tooth cleaning making teeth shiny.

ORAL SURGERY:

TOOTH EXTRACTION:

Your teeth might get infected or you may have impacted teeth and need to be removed. For that PAINLESS tooth extraction is done here.

FIXATION OF MAXILLOFACIAL FRACTURE:

Maxillo-facial fracture takes place when there is broken or cracked bone on face because of trauma. Immediate help with its fixation is given.

MUCOCOELE/CYST REMOVAL

We do mucocoele and cyst removal with the help of Rf ablation as well as conventional surgical method.

MAXILLOFACIAL PROSTHESIS - Its primarily known as artificial device, which is used for replacing missing oral or facial structures. These devices are used for reconstructing some of the missing parts in mandible, maxilla and face with prosthesis.

OBTURATORS are prepared for post cancer patients, post black fungus patients, cleft lip, cleft palate. Artificial nose, artificial ear and artificial eye can also be given for patients.
